- CSS
- HTML
- Python
- Django
- Git/Github
- MySQL

PERSONAL PROJECTS

Pupdate - [View my project](#)

As a pet owner, I don't always keep up with everything regarding my pet's health as I should. Whether it's the most recent date of vaccinations or an upset tummy, it can be hard to track. Pupdate allows users to view and track their pet's health information and vet records on a simple dashboard.

- App has full CRUD functionality and was created using React, React Hooks, React Router, and API fetch calls to JSON server
- Styling was achieved with CSS for a simple, user friendly interface

ABOUT ME

I started in software development when I was in middle school and discovered yahoo geocities. In high school, I started coding with HTML and helped build our school website. Even though I was fascinated by computers and what I could do with them, I didn't think about a career in development until a close friend nudged me in this direction almost 15 years later. It was one of the best moves I could have made for myself. I love the creative problem solving that comes with this environment and I'm looking forward to a career where I am continually learning and expanding my skillset.
