ALL ABOUT ME

I experienced my first coding class back in high school from a web development elective. At that time I never thought I would pursue coding as a career, but I had no idea how immersive and fun it would become. Much of what has driven my career as a musician has now been the same driving force behind my pursuit of software development: creativity, and curiosity!

TECHNICAL EXPERIENCE

Software Development

Nashville Software School | Oct 2020 to present
Six month, comprehensive, full-stack web developer program with an emphasis on hands-on, project-based, and team-based learning

- Built single page full-stack applications using HTML, CSS, JavaScript, and React
- Sourced code version control with Git / Github
- Server-side, test-driven development with Python, Django, and SQL
- Hands-on group project applications with fluent integral Zoom and Slack communication

PROJECTS

Keeper | Individual **

Inspired by my love of over-idealistic self-improvement, Keeper is a single-page application that allows users to create Habits that persists indefinitely, and allowing the user to see only the Habits due by the corresponding day of the week. Keeper is built in ReactJS with JSON server for persistent local data storage.
